

Dear Team,

I would like to be a part of one story which would leave a footprint worldwide and drive to the next innovation of human history. I have come across a position in your organization which is matching with my skill sets and experience. I am attaching my latest CV along with this cover letter. I believe, I am great fit for this position because of the following reason...

1. I am passionate about finding a way to improve the software quality, reduce the software development cost, and immediate release with the help of latest devops tools, practices, and process.
2. I have in-depth hands-on experience on latest development/operations tools which can be used in software development and production environment.
3. I have mentor/coach more than 20000 engineers till now for implementing CI/CD, DevOps, SRE, DevSecOps and helping organization to find best tools for their SDLC and production's needs.
4. I am managing a team of 15 people with their direction of software development, maintenance, and innovation at work.
5. I have less experience in people management, but I strongly believe that manager is the first person who postmortem and validate first, before giving guidance and coordination to their fellow engineers and I have been always working in a such environment.
6. Every organization has unique culture, process and practices and I take very less time adopting the values of organization and learn, excel.
7. I believe in learning – practice - sharing model with the world so I have author more than 5000 blogs and more than 1000s videos on youtube.

Please find my skill level, proficiency, and number of exp for your considerations.
